Full stack Developer job description

Job description

Deveryware (https://www.deveryware.com/) is a French company known in France for emergency services and security projects for public administrations. Deveryware has a strong presence in Spain collaborating with UPM in research projects within the EU Research Framework Program, such as the NEXES project (http://nexes.eu/), and aims at defining the next generation of emergency services for citizens and agencies.

We are looking for a senior developer for our commercial platform offering. This role requires a willingness to participate in the design and implementation of advanced services for the GHALE platform roadmap (https://www.ghale-services.com/). GHALE implements the Pan-European Mobile Emergency App (PEMEA) standard for interconnecting 112 European emergency centers.

The candidate will join an agile team, with the DNA for research and integration of the latest technologies, working in a complete and advanced DEVOPS environment, always seeking the highest quality for our products and customers.

Type of contract	External / subcontractor
Duration:	1 year (renewable)
Remuneration:	€30K-€40K per year (full-time), according to value and experience provided
Location:	CAIT - UPM, Campus de Montegancedo - Pozuelo de Alarcón

Job responsibilities

The role is responsible for designing, coding and supporting advanced services (Instant Messaging, Alerting, WebRTC…), from layout to function and according to the specifications. Integrating data from various back-end services and databases.

Job Duties

- 3-5 years of experience with core Java and Javascript frameworks
- Candidate must have a strong understanding of UI, cross-browser compatibility, general web functions and standards.
- The position requires a strong sense of ownership and responsibility for code quality that follows best practices Experience in working with distributed environments.
- Deep expertise and hands on experience with Web Applications and programming languages such as HTML, CSS, JavaScript, JQuery and API's.
- Deep functional knowledge or hands on design experience with Web Services (REST, Web Sockect) is needed to be successful in this position.
- Solving high priority customer issues and getting the fixes deployed within a quick turnaround time.
- Mentoring and assisting less experienced team members to acquire the skills necessary to accurately estimate work effort and deliver on time.

Skills

Proven working experience (> 2 years) in some of:

- Node.js
