**ASSYSTEM  
TECHNOLOGIES  
THINK  
DIFFERENTLY**

## BECAUSE THE WORLD IS CHANGING AND OUR CUSTOMERS ARE CHANGING, ASSYSTEM CREATED ASSYSTEM TECHNOLOGIES

Driven by environmental demands, new usage and new technologies, new requirements arise that have an impact on where and how our clients design, manufacture and support their products. ASSYSTEM TECHNOLOGIES provides with solutions throughout products' life cycle and wherever our clients are, to make products tomorrow's best sellers.

### IN THE WORLD

Assystem works for the long term, and has developed trusting, committed working relationships with world-class companies in specific areas, aerospace, automotive, defence and transport. Over the past decades, we have nurtured these relationships, listening to our clients and to their changing requirements and expectations.

Today, our in-depth knowledge and understanding of our clients company, industry and market, and the changing technologies that drive them, enable us to be creative for our clients and, if need be, challenge them.

### ANTICIPATING OUR NEEDS

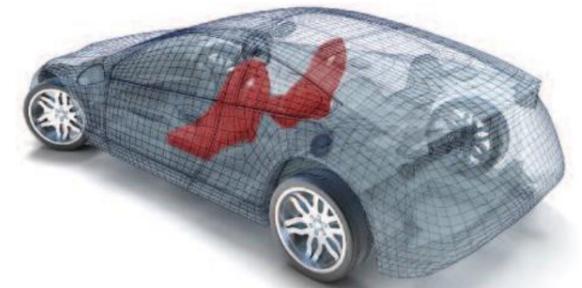

Being proactive in a long-term relationship means being able to anticipate a client's needs. We do this by working in partnership with our clients to offer a comprehensive service throughout a product's life cycle from design through manufacturing, to providing support once the product is in operation. Assystem can leverage world-class experts wherever we are, transforming our skills and experience into a solution.

### THINKING DIFFERENTLY

Through the Assystem Innovation Factory, our engineers network, share and foster new ideas that can be developed either in R&D projects or new approaches to our business to helping us stay ahead of the game. Many of our engineers have had the advantage of moving from one industry to another, because we believe that transferring skills from one sector to another boosts innovation and the spirit of continuous development.

## GLOBAL PRODUCT SOLUTIONS

can rely on the solid financial foundations of the Assystem Group, its 50 years of experience in complex infrastructure and industrial engineering, and its international presence, working for the world's largest industrial groups.

Assystem supports its customers' projects all over the world, designing and developing products and services for tomorrow and building and ensuring the optimum use of our investments throughout the product's life cycle.

### SAFETY IS PART OF OUR DNA

Our engineers work constantly on safety-critical systems and environments. The integrity, reliability and excellence of the service Assystem provides are a constant. They are the very reasons we have earned our customers' trust.

### OUR PEOPLE ARE OUR ASSET

Assystem's engineering teams make the difference and set us apart from our competitors. We bring their intelligence, their

capacity for innovation, creativity and value together to build performance - with and for our customers. Assystem provides its engineers with continuous development.

Within the Assystem Institute, where seasoned experts train younger engineers, taking the time to explain each major client's context. We give them the opportunity to work on prototypes, to look at new IT systems, and to share their knowledge with engineers from many other countries. Training enables them to channel their generic skills into different products and sectors. This is not only stimulating for the individual, it gives them a lifelong employability. This forward-looking human resources management is the key to our flexibility.

## A GLOBAL FOOTPRINT FOR LOCAL LEVERAGE

As our marketplace becomes global, so supply-chain becomes global. Competition is fiercer.

### A COMPETITIVE ADVANTAGE

Our network of capabilities means that we are able to leverage expertise near our client, decision-making centres and production sites as well as that of our suppliers.

We can rally experts from all over the world to achieve the best result for the best cost, and hence improve our cost-effectiveness. And we have proved that we come up with solutions that ensure our projects meet their deadlines within our customer budgets.

### UNRIVALLED PROJECT MANAGEMENT

Our track record in managing complex international projects is unrivalled. Optimised methodology and skills management enable us to deliver complete work packages.

Our global footprint and our engineers' mastery of multiple technologies, legal arrangements and multicultural environments ensure our success wherever we are.
